EPPAP-NICOLE FUCHS: A TRAINING AND AGROPASTORAL PRODUCTION INSTITUTION FOR THE PROFESSIONAL INTEGRATION OF YOUNG PEOPLE

SEEKING FUNDING, GRANTS AND FINANCIAL ALLOCATIONS TO ESTABLISH THE PRIVATE PROFESSIONAL AGROPASTORAL INSTITUTION-NICOLE FUCHS

An integrated site, six activities

The site

About 11 ha

Village of Elibou 2, Gomon sub-prefecture

Km 67, Autoroute du Nord

Land titles no. 6308 and 6359

Poultry farming
Layers, broilers, slaughterhouse
2028 revenue: 860 M

Pig farming
Pig breeding
2028 revenue: 170 M

Fish farming
Rearing ponds
2028 revenue: 120 M

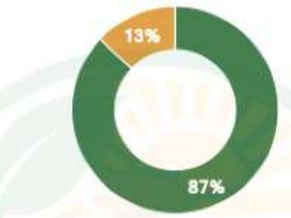

Snail farming
Giant African snail
2028 revenue: 35 M

Market gardening
Greenhouses, modern irrigation
2028 revenue: 150 M

Training
Agricultural and related trades
2028 revenue: 260 M

Total project cost: 7.94 billion FCFA

Investment — Site development, buildings, equipment	7.59 bn
Start-up — Inputs, salaries, launch, contingencies	0.35 bn
Total cost — Total financing requirement	7.94 bn

Loan: 6.91 bn | Contribution: 1.03 bn

Conclusion

Our project rests on a single principle: to produce, inspire vocations, bring young people back into education, train, create jobs and promote female entrepreneurship. We are determined to build a project that goes beyond economic development and has a real socio-economic impact on young people and on improving the agricultural ecosystem.

Today, we are looking for funding bodies that share this vision and wish to help make it a reality. EPPAP-Nicole Fuchs is not just a farm school that we want to build. It is an innovation for the future that we want to develop and grow.

About the Promoter

Mrs Nicole Fuchs, promoter of EPPAP-Nicole Fuchs, has long been committed to education and training. She is now leading the construction of the institution in the Gomon region, about 80 kilometres from Abidjan.

2002 Founded Collège Eulalie Blah 1

2011 Founded the NGO "Mon Éducation, Mon Avenir" (MEMA) and is its founding president

2013 Founded Collège Eulalie Blah 2

2021 Vice-president of the Forum of NGOs and Associations Supporting Children in Difficulty in Côte d'Ivoire

2022 Secretary for Cultural and Social Affairs of the National Federation of Private Secular Education and Training Institutions of Côte d'Ivoire (FENEPLACI)

2023 Vice-president of the Ivorian Network of Women's Organisations (RIOF) of Côte d'Ivoire

EPPAP-Nicole Fuchs is a long-matured project that has already achieved its first milestones: the promoter's initial contribution made it possible to acquire the site that will host it, in Elibou 2.

EPPAP-NF
Innover pour l'avenir

EPPAP-Nicole Fuchs is an integrated vocational training and agropastoral production project that aims to train young people, especially vulnerable young women, and help them secure lasting employment. Located on a site of approximately 11 hectares in Elibou 2, the project is seeking funding of 6,910,981,464 FCFA to build its infrastructure, set up its production units and support its economic and social model.

CLEARING, BACKFILLING AND LEVELLING WORKS ON THE EPPAP-NICOLE FUCHS SITE

The EPPAP-Nicole Fuchs opportunity

Côte d'Ivoire offers a favourable environment for agropastoral projects, particularly in education and training or farm-school projects. With nearly 10 million farmers **(52% men and 48% women)** and more than one million livestock farmers, the sector is **a pillar of the Ivorian economy (15% of GDP).**

However, skills in this field remain limited. Only 800 to 900 young people are actually trained each year. Demand is high, but the supply of practical training and job placement remains low. Yet many policy and strategic frameworks are steering the country towards the modernisation and professionalisation of agriculture and livestock farming.

This is the context for the Private Professional Agropastoral Institution-Nicole Fuchs project **(EPPAP-Nicole Fuchs)**: a project that combines economic development with social impact.

The EPPAP-Nicole Fuchs vision

To promote sustainable local development by training young agri-entrepreneurs, including vulnerable women, strengthening their professional integration and developing modern, profitable agropastoral farms.

SHORT TERM

Build the infrastructure needed for training, production and agropastoral operations.

MEDIUM TERM

Train young people and support their entry into the workforce, with particular attention to vulnerable young women.

LONG TERM

Strengthen agropastoral value chains and local economic dynamism.

2-or-3-year goal

Over the next three years, our priority is to launch EPPAP-Nicole Fuchs at PK67, and then to expand its agricultural and livestock production, training, and vocational integration activities, drawing on the experience of the Eulalie Blah Junior High Schools.

YEAR 1

The first year will be devoted to launching a production unit with 20,000 laying hens and a feed mill, building the team, and securing market outlets.

YEAR 2

The second year will include a production unit for 5,000 broiler chickens, a slaughterhouse, greenhouses with precision irrigation, and the enrollment of the first trainees, particularly young women in vulnerable situations.

YEAR 3

The third year will aim for a production capacity of 40,000 laying hens and 14,000 broiler chickens, as well as strengthening distribution and employment integration partnerships.

This expansion will be tailored to the funding secured, performance metrics, and market demand. We will monitor profitability, jobs created, people trained, their successful transition into the workforce, and water and energy consumption to ensure the farm's long-term sustainability and the continuation of its training mission.

3-or-5-year development plan

Our strategy is to expand the production and training capacity of EPPAP-Nicole Fuchs, and subsequently establish a network of partner producers and former students.

Investments will be guided by demand, profitability, and available resources, with ongoing monitoring of employment and career integration.

Market opportunity

We focus on supplying local food products to retailers, bakeries, hotels, restaurants, and supermarkets in Abidjan and the area around PK67. Agricultural and livestock training for young people and producers is a complementary activity. Our growth will be based on regular orders, food safety, traceability, and training tailored to professional needs.

Competitive advantage

Our strength lies in our 24 years of experience in education, our local presence, and the planned integration of agricultural and livestock production with hands-on training. Our competitive edge will be based on our educational expertise, the reliability of our programs, our partnerships, and our learners' success in entering the workforce.

Competition

Our competitors include private institutions, agricultural training centers, and producers serving the same markets. Public education, informal learning, and imported food products are alternatives. EPPAP-Nicole Fuchs will distinguish itself through a program that combines production, hands-on learning, and employment support, the results of which will be measured after the program launches.

Market and commercial potential

According to FIRCA, Côte d'Ivoire produced 1.308 billion table eggs in 2024. At a hypothetical price of 2,400 CFA francs per tray of 30 eggs, this volume represents an estimated value of 104.6 billion CFA francs. We primarily target professional buyers in Abidjan and in areas accessible from PK67. With 20,000 laying hens, an average laying rate of 80%, and full sales of our production, our theoretical potential is 467 million CFA francs per year once operations are fully established.

Steps and expected results

Once funds become available, we aim to establish a capacity of 20,000 laying hens and a feed production facility within nine months, with the necessary additional funding; secure ten recurring buyers within fifteen months; and enroll the first 30 trainees, of whom 50% will be women, within eighteen (18) months. Monitoring of job placement will begin six months after training. These objectives are preliminary. The funding, together with other mobilized resources, will help make the first phase of the EPPAP-Nicole Fuchs project operational within eighteen (18) months of the funds becoming available.

Why partner with us?

Team skills

EPPAP-Nicole Fuchs is led by a team with expertise in management, education, animal production, agriculture, and solar energy.

Ms. Nicole Fuchs, founder initiator of the project, has 24 years of experience. She holds a master's degree in marketing and international management, that qualifies her to teach and lead educational institutions, and she brings her expertise in school administration and youth support to the project.

The team also draws on experienced professionals in the fields of livestock farming, agriculture, energy, and management. These skills support the preparation of facilities and the development of a project that combines agricultural and livestock production with hands-on training. Specialized hiring will round out the skills needed to operate the facility and supervise the trainees.

Title	Degree	Professional experience
Director, Founder, and Manager of the Eulalie Blah Junior High Schools EPPAP Project Promoter — NICOLE FUCHS	Master's degree in Marketing and International Management Authorization to Teach and Supervise	24 years
Executive Director, EPPAP Project — NICOLE FUCHS	Bachelor's degree in Management Science Authorization to Teach and Supervise	23 years
General Manager, EXPERTISE ENERGIE Project Support Manager, WAPP WORLD BANK Dorsale Nord	Master's Degree (Year 2) in Project Management Master's Degree (Year 2) in Solar Energy and Energy Efficiency Master's Degree (Year 2) in Corporate Communications	15 years
Chief Executive Officer of AQUAPRO	Master's Degree in Auditing and Management Control	10 years
Director of Faso Élevage	Animal Production Engineer	16 years+
Chief Executive Officer of Agriserre	Bachelor's Degree in Agriculture	10 years
Technical Director of Ivoire Élevage International SARL	Master's Degree in Animal Production (Poultry Farming)	7 years
Expert in Poultry and Swine Farming	Animal Production Engineer	25 years

Beneficiaries

The EPPAP-Nicole Fuchs program will focus on young people seeking vocational training, vulnerable young women, and rural communities around PK67. Their top priorities are accessible hands-on training, access to employment, and support in finding gainful employment.

Jobs and income

EPPAP-Nicole Fuchs employs six (6) people. The project is expected to create one hundred thirty-eight (138) additional jobs over time, depending on its development and the funding secured. Changes in beneficiaries' incomes have not yet been measured.

Impact on employment

Our educational and agricultural and livestock activities are already supporting local employment. EPPAP-Nicole Fuchs will gradually create jobs in production, processing, and marketing. Its technical and management training programs will focus on helping young people enter the workforce, promoting women's economic independence, and expanding the activities of rural producers and informal-sector workers.

Technology solutions

The EPPAP-Nicole Fuchs project calls for the installation of modern poultry equipment, including pipette-based watering systems and automated egg-counting systems, as well as a feed mill, greenhouses equipped with precision irrigation systems, and a solar power system. Modern swine production facilities, featuring varying levels of automation, are also being considered, along with a system for treating swine effluent through lagooning and laboratories dedicated to the collection of boar semen and the extraction of snail slime. These facilities will support agricultural and livestock production and provide hands-on training for students.

Climate impact

Greenhouses adapted to the local climate, precision irrigation, and drip irrigation will aim to conserve water and ensure a stable supply of produce. Solar power will reduce the need for generators. Trainees will be trained in these practices. Monitoring will focus on water consumption, the share of solar power, and fuel usage.

Impact measurement

EPPAP-Nicole Fuchs will track the number of people trained, the skills acquired, the jobs created, employment rates at six and twelve months, and changes in income. A quarterly dashboard will include water and energy consumption data, broken down by gender and age.

The proposed approach

The project adopts an integrated, sustainable agropastoral model that links vocational training with the commercial operation of crop and livestock production. EPPAP-Nicole Fuchs enables beneficiaries to learn by working in real production units, which strengthens their technical skills and employability while fostering an entrepreneurial spirit. At the same time, the revenue generated by selling the produce finances the running of the Institution and ensures the sustainability of the production system. The planned production units are:

1 Poultry farming

CAGED BROILER CHICKEN FARMING

CAGED LAYING HEN FARMING

2 Fish farming

ABOVE-GROUND TILAPIA FARMING

POND TILAPIA FARMING

3 Snail farming

ACHATINICULTURE (GIANT AFRICAN SNAIL FARMING)

SNAIL PENS AND ENCLOSURES

SNAIL PENS AND ENCLOSURES

4 Market gardening

GREENHOUSE VEGETABLE GROWING WITH PRECISION IRRIGATION SYSTEMS

5 Pig farming

PIG FARMING (BREEDING, SEMEN COLLECTION AND SALE OF DUROC PIGS AND SEMEN)

Preparation phase — building the infrastructure needed for training, production and agropastoral operations

4
G+2 buildings for training and vocational education

5
G+3 buildings for the boys' and girls' boarding school

2
modern pig-farming buildings, with an insemination laboratory and lagoon-based treatment of pig effluent

4 × 10,000
laying hens, fully equipped buildings

7 × 2,000
broiler chickens, fully equipped buildings

30
imported greenhouses equipped with precision irrigation systems

20
500 m² ponds and a 2-hectare water reservoir

4
boreholes and hydraulic pumps

1,000 kW
of solar power

1,000 kVA
of soundproofed solar generator sets

Operational phase — training young people and supporting their entry into the workforce, with particular attention to vulnerable young women

Training

- Development of curricula and practical modules: market gardening, poultry, fish farming, livestock and processing
- Farm management training
- Sessions on local value chains
- Hands-on practice in the production units
- Individual coaching to define a career or business plan
- Rural entrepreneurship workshops: business plan, local marketing, financial management
- Support for setting up micro-enterprises (small poultry, market-gardening and fish-farming units)
- Mentoring by experienced producers or local cooperatives
- Post-training follow-up for 6 to 12 months
- Psychosocial support for young women in vulnerable situations
- EPPAP-Nicole Fuchs access scholarships for vulnerable young women
- Priority access to start-up kits for vulnerable women (small equipment, inputs)

Sustainability: strengthening the value chain

- Value-added products: packaged eggs, oven-ready chickens, packaged vegetables
- Support for standardisation: packaging, labelling, compliance with health standards
- Simple quality-control laboratory: moisture, pH, preservation
- System for collecting and transporting produce to markets
- Community sales outlets
